

RISE

The Alarm Clock That Actually Changes Your Life

An Investor Brief

Confidential · March 2026

“Most people wake up the same way they did ten years ago. ” RISE is the first alarm clock designed to change that.

Seeking: Seed Investment for Growth & User Acquisition

THE SIMPLE TRUTH

Every morning is a fresh start. Most people waste it.

There are over 2 billion smartphones on Earth. Almost every single one has an alarm clock on it. People set their alarm, it rings, they hit snooze — and repeat this same cycle for years.

Nothing about that alarm clock is on their side.

It does not care if they actually got up. It does not remember that they have been hitting snooze for 400 days straight. It does not know that they promised themselves this year would be different. It just rings. They just snooze. And the morning — the most powerful part of the day — disappears.

RISE is an alarm app that does not let you go back to sleep — and then helps you understand why you keep trying to.

That is the entire product, stated simply. But the technology behind it and the business it creates are genuinely large.

Why do people keep hitting snooze?

Most people who download alarm apps are not looking for a louder alarm. They are looking for something that actually works — something that gets them up and keeps them up.

The three real problems are:

Problem	What It Feels Like
No accountability	You can always just... hit snooze. Nothing happens. Nobody knows.
No consequences	The alarm has no memory. Yesterday's failure costs nothing today.
No understanding	People do not know WHY they cannot wake up. Bad sleep? Poor nutrition? Stress? They are guessing.

Existing apps address the first two problems with tricks — math puzzles, shaking the phone, scanning a barcode. These work for a while, then people stop using them because the app still does not explain anything or genuinely care about their progress.

RISE solves all three. The alarm is hard to dismiss. The streak is hard to quit. And the understanding — the weekly and monthly AI-written insights into your own patterns — is something no other alarm app offers at all.

THE PRODUCT

What RISE actually does

RISE is built around one core idea: waking up is not a single moment, it is a habit — and habits are built through accountability, identity, and understanding.

Layer 1 — The Alarm That Holds You Accountable

When your RISE alarm fires, you cannot dismiss it by pressing a button. You have to prove you are awake:

- Complete a wake game (mathematics, memory, word puzzles) — difficulty set by you
- Optional: place your finger on the camera for a heartbeat reading
- 15 minutes later, a follow-up check confirms you did not go back to sleep
- If you do not confirm, your accountability buddy receives an automatic message

Layer 2 — The Life Tracking That Keeps You Going

RISE quietly tracks the things that affect your mornings:

- How long and how well you slept
- What you ate and when (with full support for African, South Asian, Middle Eastern and global cuisines — not just Western foods)
- Your daily intentions and morning tasks
- Your habit streak and consistency over time

Layer 3 — The AI That Explains You To Yourself

This is what makes RISE genuinely different:

Every week, RISE writes you a personal review. Not a list of numbers and graphs — a real paragraph, in plain language, by an AI that has been watching your patterns. It tells you what it noticed, what the data suggests, and what to carry forward.

Every month, it writes you a letter. Addressed to you by name. About who you were this month based on what you actually did — not who you planned to be.

This is the product people pay for. Everything else — the alarm, the streak, the games, the food tracker, the quotes, the goal journal — is free. Forever.

THE MARKET

Who is this for?

The honest answer is: anyone with a smartphone and a morning they want to improve. But let us be specific.

2.3B

Smartphone users who set alarms daily

680M

Active wellness app users globally

1.8B

Muslims globally (Ramadan-aware alarms)

\$8.3B

Sleep & wellness app market by 2027

Why Africa and the Global South Are Central, Not an Afterthought

Most wellness apps are built for users in the United States and Western Europe. They assume English is your first language, that your food is in a Western database, and that your faith does not affect your morning routine.

RISE is built differently:

- Nigerian jollof rice, Kenyan ugali, Ethiopian injera, Egyptian ful, Senegalese thieboudienne — all in the calorie tracker with accurate nutritional data
- Swahili, Hausa, and Amharic proverbs shown in their original language before the English translation
- Ramadan mode: Suhoor and Iftar meal tracking, fasting hour monitoring, a “Ramadan Mubarak” banner
- Faith-aware morning quotes across 10 traditions — including secular as a first-class choice
- Prices set by country: what costs \$9.99 in the US costs \$2.49 in Nigeria

This is not charity. These users are underserved, loyal, and fast-growing. Nigeria alone has over 100 million smartphone users. Ethiopia is the fastest-growing mobile market in Africa. These are real, large, paying audiences being ignored by every major competitor.

A simple, honest business model

RISE is free to use. Everything that helps you wake up and track your life is free. We make money from people who want to understand their patterns — and from discreet advertising to free users.

Subscriptions — The Main Revenue

Plan	What It Adds — Beyond the Free Experience
Free	Full alarm engine, wake games, sleep tracking, food tracker, goals, habit streaks, daily quotes, proof wall. Everything. Free forever.
Core — from \$2.49/mo	Weekly AI review (the conversion trigger), full sleep history, sleep-nutrition pattern analysis
Pro — from \$3.99/mo	Monthly personal letter, daily AI morning briefing, smart home integration (lights on before alarm), deeper analytics
Guardian — from \$6.99/mo	Parent sets alarm for child. Child cannot dismiss it without proof. Parent gets notified. Everything in Pro included.

Prices shown are for the lowest-income markets. In the US, UK, and Europe, these are \$5.99, \$9.99, and \$16.99 respectively. The app detects which country you are in and sets the price automatically.

The Conversion Mechanic That Actually Works

Free users who have been using RISE for a week see the first paragraph of their weekly review in full. The rest is blurred out. One button: “See your full review.”

This is not a generic sales pitch. It is their own data. Their own story. The first paragraph was already compelling enough to make them want the rest. Our projected conversion rate from this mechanic alone: 8–12% of free users who see it.

Advertising — The Secondary Revenue

One sponsor message per week, shown at the bottom of the weekly review screen, free users only, clearly labeled “Sponsored.” Never in the morning ritual. Never intrusive.

We have intentionally left this revenue stream dark until the user base is large enough to approach brands directly rather than using advertising networks. When we have 200,000+ active free users, we will offer a single, relevant sponsor placement at a flat monthly rate — clean, editorial, and worth something to the right brand.

THE NUMBERS

What this looks like financially

These projections are conservative. They assume modest acquisition and a free-to-paid conversion rate of 5–10% depending on market.

Subscription Revenue Projections

Active Users	Paying Subscribers (7%)	Avg Monthly Revenue Per Sub	Annual Revenue
100,000	7,000	\$5.40 blended	~\$453,000
500,000	35,000	\$5.40 blended	~\$2.3M
2,000,000	140,000	\$5.40 blended	~\$9.1M
5,000,000	350,000	\$5.40 blended	~\$22.7M

The \$5.40 blended average assumes approximately 60% of subscribers on Core, 30% on Pro, 10% on Guardian, weighted across regional pricing tiers.

Advertising Revenue Projections (once activated at scale)

Free Users	Weekly Summary Opens (40%)
500,000	200,000
2,000,000	800,000
5,000,000	2,000,000
10,000,000	4,000,000

Advertising becomes material at scale. Our priority is reaching 500K users on subscription revenue first. The ad infrastructure is built and ready — it simply is not turned on yet.

COMPETITIVE POSITION

Why RISE wins where others plateau

There are dozens of alarm apps. There are also many habit trackers, calorie counters, sleep trackers, and journal apps. RISE is the only product that is all of these things in one place, connected to each other, and with an AI that makes sense of the combination.

	RISE	Alarmy	Fabulous	Headspace
Hard-to-dismiss alarm	Yes	Yes	No	No
Wake games + biometrics	Yes	Partial	No	No
Sleep tracking	Yes	No	Partial	No
Calorie + food tracker	Yes	No	No	No
Global food database (incl. Africa)	Yes	No	No	No
Habit tracker + goal journal	Yes	No	Yes	No
AI weekly review (narrative)	Yes	No	No	No
AI monthly personal letter	Yes	No	No	No
Ramadan mode	Yes	No	No	No
Smart home integration	Yes	No	No	No
Accountability buddy system	Yes	No	No	No
Free forever (core features)	Yes	No	No	Partial

No other alarm app has an AI that writes you a personal review of your week. That feature alone is the reason people subscribe. Everything else is the reason they stay.

A FEATURE WORTH HIGHLIGHTING

The Guardian Plan

One of the most underserved markets in the wellness app space is parents who want their children to actually get up for school. RISE's Guardian plan speaks directly to this:

- A parent sets the alarm. The child cannot turn it off, change the difficulty, or delete it.
- The child must complete a wake game to dismiss it. The parent is notified when the alarm fires and when it is dismissed.
- If the child does not dismiss it within a set window, the parent receives an escalating alert.
- The parent can see the child's wake game results over time.

At \$6.99–\$16.99 per month, this is the highest-value plan in the lineup. Parents pay for peace of mind. The product genuinely delivers it.

This segment is largely untouched by every competitor in the market. It is a clear, paying, motivated audience with a real problem that RISE solves completely.

BUILD STATUS

Where we are today

RISE has a complete technical blueprint spanning 12 detailed engineering documents and approximately 190 individual code files. This is not a concept — it is a fully specified, developer-ready product.

Component	Status
Alarm engine (5-layer failsafe)	Blueprint complete — ready to build
Biometric verification (heartbeat + face)	Blueprint complete
Sleep detection & quality scoring	Blueprint complete
Wake games (5 games, adaptive difficulty)	Blueprint complete
Goals journal + habit tracker	Blueprint complete
AI weekly review & monthly letter	Blueprint complete
Calorie tracker (global food DB)	Blueprint complete
Quotes system (7 categories, original languages)	Blueprint complete
Onboarding (3 modes incl. Assisted)	Blueprint complete
Payments (Flutterwave + Stripe, 4 regional tiers)	Blueprint complete
Smart home integration (Hue, LIFX, SwitchBot)	Blueprint complete
Offline-first architecture	Blueprint complete
Guardian plan (parent-child alarms)	Blueprint complete

We are seeking investment to move from blueprint to live users. The engineering work is estimated at 3–4 months for a small, experienced Flutter team.

What we are asking for and why

We are raising a seed round. The primary use of funds is user acquisition — getting RISE in front of the people who need it most.

How the money gets used

Category	Allocation and Purpose
User Acquisition (Ads)	60% — Paid campaigns on Meta, TikTok, YouTube targeting morning routine, self-improvement, and faith-based audiences. This is the primary focus.
Engineering (Launch)	25% — Development team to build RISE from the complete blueprint to App Store release on iOS and Android.
Operations & Infrastructure	10% — Firebase, server costs, payment processing, Anthropic API (AI reviews), and customer support tooling.
Legal & Compliance	5% — App store compliance, payment regulations across markets, basic IP protection.

Why ads are the right use of this capital

RISE does not need to convince people they have a morning problem. They already know. Millions of people search for “how to stop hitting snooze” and “best alarm app” every single month.

Paid acquisition in this space converts at high rates because the audience self-selects. Someone watching a 30-second video about an alarm that makes you prove you are awake is already the right person for this product. They do not need to be persuaded — they need to see that RISE exists.

Once a user installs RISE and experiences their first wake game, their first streak, their first weekly review preview — the product sells itself. The retention data on competing apps that use wake games shows 30-day retention of 40–60%, compared to 5–10% for standard alarm apps. RISE’s additional layer of AI understanding and goal tracking is designed to push that further.

W H Y N O W

The timing is right

Three things are true right now that make this the right moment:

1. AI is now affordable enough to personalise at scale

A year ago, generating a personalised 400-word weekly review for millions of users would have been prohibitively expensive. Today, with the latest generation of AI models, it costs pennies per user per week. The unit economics finally work.

2. African mobile markets are at an inflection point

Nigeria, Kenya, Ethiopia, Ghana, and South Africa are all seeing rapid growth in smartphone adoption and mobile payments. Flutterwave and similar services now make it practical to accept subscription payments in local currencies. This market has never been served by a premium wellness app built with them in mind. RISE is that app.

3. The self-improvement app market is large but stale

Headspace, Calm, and Fabulous have all raised hundreds of millions of dollars and built large user bases — but none of them touch the alarm. The alarm is where the day actually starts. Nobody owns that moment with the depth RISE brings. The category is ready for a product that connects the morning to the rest of the day.

Where this goes

The alarm clock is the entry point. But the data RISE accumulates over months and years is something no other app will have:

- How sleep quality correlates with food choices, for real people in real countries
- How morning consistency connects to goal completion
- How accountability (the buddy system) affects long-term behaviour change
- How different wake games affect actual alertness

This is longitudinal behavioural data about real human mornings, across cultures, income levels, and geographies. At scale, it has value beyond the subscription business.

In three years, we see RISE as the platform through which people understand and improve their daily rhythms — not just a tool that wakes them up, but the product that earns the first 30 minutes of every morning.

The alarm clock market has not been meaningfully innovated in 15 years. RISE changes that. We are not building a better alarm. We are building the first alarm that genuinely cares whether your life is going in the right direction.

NEXT STEPS

Let's talk

If you have read this far and you feel what we feel — that this is a real product, a real market, and a real opportunity — we would like to speak with you.

We are happy to share:

- The complete 12-part technical blueprint (190+ files, fully specified)
- A detailed financial model with multiple growth scenarios
- A product walkthrough of the key user flows
- Our proposed go-to-market sequencing by region

RISE is not looking for the largest cheque. We are looking for an investor who understands that the people most in need of a great morning — a disciplined, intentional, conscious morning — are not only in San Francisco.

RISE

Wake up on purpose.
